Rent-A-Vacation Pitch Deck Script

Purpose: Slide-by-slide guide for building a presentation in Canva, PowerPoint, or Keynote **Version:** 1.0 | February 21, 2026 **Duration:** ~20 minutes (expandable to 30 with deep-dive slides) **Audience:** Investors, partners, stakeholders, or demo walkthrough **Demo URL:** dev.rent-a-vacation.com

Honesty Note: Every slide is marked [BUILT], [INDUSTRY DATA], or [PROJECTED]. We lead with what we've built — the technology is the proof.

SLIDE STRUCTURE OVERVIEW

#	Section	Slides	Time
1-2	Opening & Problem	2	2 min
3-4	Market Opportunity	2	2 min
5-6	Solution & How It Works	2	3 min
7-12	Product Deep Dive (6 features)	6	6 min
13	Technology & Quality	1	1 min
14-15	Business Model & Unit Economics	2	2 min
16	Go-to-Market	1	1 min
17	Competitive Advantage	1	1 min
18	Roadmap	1	1 min
19	The Ask / CTA	1	1 min

Total: 19 slides, ~20 minutes

SLIDE 1: Title

Visual: Full-bleed hero image of a luxury resort pool/beach. Teal gradient overlay. RAV logo top-left.

Text:

```
RENT-A-VACATION

Name Your Price. Book Your Paradise.

The AI-Powered Marketplace for Vacation Club Rentals

[Presenter Name] | [Date]
rent-a-vacation.com
```

Speaker Notes:

> "Thank you for your time today. I'm going to show you something we've built that changes how 10 million American families think about their vacation club ownership — and how 150 million travelers find their next vacation."

SLIDE 2: The Problem — Two Sides, One Broken Market

Visual: Split screen. Left: frustrated owner looking at a maintenance fee bill. Right: frustrated traveler looking at inflated resort prices. Red tones.

Text:

```
THE PROBLEM

OWNERS                              TRAVELERS

9.9M households pay $1,120+/yr      Resort bookings marked up 20-40%
in maintenance fees                 over owner cost

50%+ want out                       No way to negotiate
Can't monetize unused weeks         Generic platforms, no specialization
Fragmented, low-trust options       No AI. No voice. No bidding.
```

Labels: All numbers are [INDUSTRY DATA — ARDA 2024]

Speaker Notes:

> "Here's the core tension. On the left: nearly 10 million American families own timeshares. They pay over a thousand dollars a year in maintenance fees — fees that rise 4-8% annually — for weeks they often don't use. Over half of them want to reduce or exit their ownership. On the right: travelers are paying inflated resort-direct rates for the exact same rooms these owners can't fill. The market that connects them? It's Craigslist, Facebook groups, and legacy sites with no verification, no AI, and no trust. This is the gap we've built Rent-A-Vacation to fill."

SLIDE 3: The Market

Visual: Clean infographic. Large numbers. Teal and coral accents.

Text:

```
THE MARKET OPPORTUNITY

$10.5B          9.9M            $1,120
Vacation        U.S. Timeshare  Average Annual
Ownership       Households      Maintenance Fee
Industry                        (rising 4-8%/yr)

Secondary rental market: $2-3B estimated
No tech-first leader in this space today
```

Labels: All [INDUSTRY DATA — ARDA, IBIS World]

Speaker Notes:

> "This is a $10.5 billion industry with nearly 10 million households — and there is no technology-first platform serving the secondary rental market. VRBO and Airbnb treat timeshares as an afterthought. RedWeek and TUG are community forums, not marketplaces. The secondary rental market alone is estimated at $2-3 billion, and it's fragmented across thousands of disconnected channels. We built the platform to consolidate it."

SLIDE 4: Why Now?

Visual: Timeline or convergence graphic showing 3 forces meeting.

Text:

```
WHY NOW?

1. AI IS READY
   Voice + text AI can now understand "Find me a
   beachfront 2-bedroom in Maui" — and deliver results.
   This wasn't possible 2 years ago.

2. MAINTENANCE FEES ARE BREAKING OWNERS
   Fees have risen 40%+ in the last decade.
   Owners are desperate for alternatives.

3. TRAVELERS WANT CONTROL
   The next generation of travelers expects
   to negotiate, bid, and personalize — not
   just take a price or leave it.
```

Speaker Notes:

> "Three forces are converging right now. First, conversational AI has reached the point where a voice query like 'Find me a beachfront 2-bedroom in Maui under two thousand dollars' actually works — reliably. We've built it and you'll see it live in a moment. Second, maintenance fees have been rising relentlessly. Owners are more motivated than ever to monetize their unused weeks. And third, travelers — especially younger demographics — expect to negotiate and personalize, not just accept a fixed price on a grid. The market is ready. The technology is ready. And we've built the product."

SLIDE 5: The Solution

Visual: Product screenshot of the RAV homepage or a mockup showing voice search + bidding + listings.

Text:

```
RENT-A-VACATION

The first marketplace purpose-built
for vacation club owners and travelers.

✓ Marketplace — Listings, Wishes, Offers          [BUILT]
  (renters offer on Listings; owners offer on Wishes)
✓ RAV Deals — distressed/expiring inventory       [BUILT]
✓ TrustShield + PaySafe — verified & secure       [BUILT]
✓ Ask RAVIO — AI voice & text search              [BUILT]
✓ ResortIQ — 117 resorts, 351 unit types          [BUILT]
✓ RAV Smart Suite — 5 tools                       [BUILT]
  (SmartEarn, SmartPrice, SmartCompare, SmartMatch, SmartBudget)
✓ Dynamic Pricing — urgency, seasonal, demand     [BUILT]
✓ Notification Center — in-app, email, SMS        [BUILT]
✓ Public API & Developer Portal (/developers)     [BUILT]
✓ Referral Program — owner growth engine          [BUILT]
✓ Renter Dashboard /my-trips + Saved Searches     [BUILT]

Everything listed above is deployed and demonstrable today.
```

Speaker Notes:

> "This is what we've built. Not a roadmap. Not a prototype. A fully functional, end-to-end marketplace with AI-powered search, two-sided bidding, owner verification, escrow payments, and AI-powered pricing intelligence. Every single item on this slide is built, tested, and deployed. I can show you any of these live."

SLIDE 6: How It Works

Visual: Simple 3-step flow diagram. Two tracks (traveler and owner).

Text:

```
HOW IT WORKS

FOR TRAVELERS                    FOR OWNERS

1. SEARCH or WISH               1. LIST
   Ask RAVIO by voice/text,        Create a Listing in minutes.
   or post a Wish.                 ResortIQ auto-fills details.

2. OFFER or BOOK                 2. GET VERIFIED
   Make an Offer at your price      TrustShield confirms your
   on any Listing, or book direct.  identity and ownership.

3. ENJOY                         3. EARN
   Check in at the resort.         Get paid via PaySafe escrow.
   PaySafe protects your stay.     Offset maintenance fees.
```

Speaker Notes:

> "For travelers: search by voice or text, bid on properties or post a wish and let owners compete, then book with escrow protection. For owners: list your property — our ResortIQ database auto-fills the details so it takes minutes, not hours — get verified through TrustShield, then earn income that goes directly toward offsetting your maintenance fees. Both sides benefit. The platform handles verification, payments, and trust."

SLIDE 7: Deep Dive — Name Your Price (Bidding)

Visual: Screenshot of the bidding interface or a simple graphic of price negotiation.

Text:

```
NAME YOUR PRICE — Bid on Any Listing                    [BUILT]

On VRBO/Airbnb:  See price → take it or leave it
On RAV:          See price → make an offer → negotiate

Features:
• Owners open listings for competitive bidding
• Travelers place bids (with optional message)
• Owners can accept, reject, or counter-offer
• Real-time bid activity feed for owners
• Bid Spread Index tracks market efficiency

"The price tag just got a negotiation button."
```

Speaker Notes:

> "Let's start with our most unique feature. On every other platform, you see a price and that's it. On RAV, owners can open their listings for bidding. Travelers make offers. Owners can accept, reject, or counter. It's real negotiation — and it produces data we can't get any other way. Our Bid Spread Index tracks the gap between what travelers offer and what owners accept, giving us insight into marketplace pricing efficiency. No other vacation rental platform has a bidding engine. This is built and working in our demo environment."

SLIDE 8: Deep Dive — Wishes (Renter Open Call)

Visual: Flow diagram: Traveler posts wish -> Owners see demand signal -> Owners send proposals -> Traveler picks best offer.

Text:

```
WISHES — Let Owners Compete for You                    [BUILT]

Traditional:  Traveler browses → picks a listing → pays the price
RAV:          Renter posts a Wish → owners send Offers → renter picks

How it works:
1. Renter says: "I want Maui, March 15-22, 2BR, under $1,800"
2. Matching owners see the Wish + demand signal
3. Owners send Offers with their best price
4. Renter reviews all Offers and picks the winner

→ Owners get demand intelligence (what travelers actually want)
→ Renters get personalized Offers (not one-size-fits-all search)
→ The platform gets price discovery data
```

Speaker Notes:

> "This is the other side of our Marketplace. We call them Wishes. Instead of the renter hunting through listings, they describe what they want — destination, dates, budget, requirements. We surface the Wish to relevant property owners, who send Offers. The renter picks the best Offer. This creates real price discovery — owners see actual demand, renters get competitive Offers, and the platform learns what the market really values. The entire workflow is built — Wishes, Offers, matching, notifications."

SLIDE 9: Deep Dive — TrustShield & PaySafe (Trust Infrastructure)

Visual: Shield/security graphic. Verification steps shown as a checklist.

Text:

```
TRUSTSHIELD + PAYSAFE — Trust, End to End                [BUILT]

TRUSTSHIELD (Owner Verification):
✓ Identity verification (government ID)
✓ Ownership documentation (deed, certificate)
✓ Trust level progression (new → verified → trusted)
✓ Admin review workflow

PAYSAFE (Payment Protection):
✓ Stripe-powered escrow
✓ Funds held until check-in confirmed
✓ Owner confirmation timer (60 min, with extensions)
✓ Resort confirmation number tracking
✓ 4-tier cancellation policy engine
✓ Automated refund processing

"Every owner verified. Every dollar protected."
```

Speaker Notes:

> "Trust is the single biggest barrier in peer-to-peer vacation rentals. We solve it with two systems. TrustShield is our multi-step owner verification — identity check, ownership documentation, admin review, with a trust level that improves over time. PaySafe is our escrow system — built on Stripe, funds are held until the traveler checks in and confirms their stay. We also built an owner confirmation timer with extension capability, resort confirmation number tracking, and a 4-tier cancellation policy engine. This entire trust infrastructure is built and operational."

SLIDE 10: Deep Dive — Ask RAVIO (Voice AI)

Visual: Screenshot of voice search in action — waveform animation, search results appearing. Or a 15-second embedded video.

Text:

```
ASK RAVIO — AI Vacation Concierge                     [BUILT]

"Find me a beachfront 2-bedroom in Orlando
 under $1,500 for spring break"

• Deepgram Nova-3 speech-to-text (latest, most accurate)
• GPT-4o-mini for natural language understanding
• Results in seconds with voice narration
• Also available as text chat (Chat with RAVIO)
• 16 custom keyword boosts for timeshare terminology
• Smart endpointing — knows when you're done speaking

An industry first — no other vacation rental platform
offers voice search.
```

Speaker Notes:

> "Beyond the marketplace mechanics, we also built an AI search layer. RAVIO is our voice and text concierge — the first voice-powered search on any vacation rental platform. Say what you want in natural language, and RAVIO understands destinations, dates, prices, brands, amenities, even specific resort names. It uses Deepgram's Nova-3 transcriber and GPT-4o-mini for intent extraction. We also built a text-based version for users who prefer typing. This makes the marketplace easier to navigate, especially for less tech-savvy users."

[LIVE DEMO MOMENT — switch to dev.rent-a-vacation.com and demonstrate voice search]

SLIDE 11: Deep Dive — ResortIQ (Curated Resort Directory)

Visual: Screenshot of the listing form auto-populating from resort data. Or a map showing resort coverage.

Text:

```
RESORTIQ — Curated Resort Directory                    [BUILT]

117 Resorts │ 351 Unit Types │ 10+ Countries

Coverage:
• Hilton Grand Vacations — 62 resorts
• Marriott Vacation Club — 40 resorts
• Disney Vacation Club — 15 resorts
• Wyndham, Bluegreen, Hyatt, and more

What it does:
• Auto-populates listing forms (bedrooms, bathrooms, sq ft, amenities)
• Displays consistent resort information on every listing page
• Enables voice search to understand resort names and locations
• Owner-crowdsourced corrections improve data quality over time

Impact: Listing creation designed to take ~8 minutes vs. industry ~22 minutes
```

Labels: 117/351/10+ are [BUILT]. Timing comparison is [PROJECTED based on form design analysis].

Speaker Notes:

> "ResortIQ is our curated resort directory — 117 resorts and 351 unit types across 9 vacation club brands, organized from officially published resort information. When an owner creates a listing, they select their brand and resort, and the system auto-fills everything — bedrooms, bathrooms, square footage, amenities, policies. This dramatically reduces listing friction. It also powers our voice search — when a traveler says 'Hilton resorts in Hawaii,' RAVIO knows exactly which properties to show. The directory improves over time through owner-submitted corrections."

SLIDE 12: Deep Dive — My Rentals (Owner Suite: Smart Suite + Dynamic Pricing + Notification Center)

Visual: Split screen. Left: SmartPrice badge on a listing. Right: Calculator results showing break-even.

Text:

```
MY RENTALS — Empowering Owners to Earn More            [BUILT]
(formerly "Owner's Edge" / "RAV Edge" — Session 47 rebrand)

RAV SMARTPRICE:
• AI-powered pricing recommendation on every listing
• Compares to similar properties (same resort, unit type)
• "Fair Value" / "Overpriced" / "Underpriced" badges
• Helps owners price competitively → faster bookings

RAV SMART SUITE (5 tools at /tools):
• SmartEarn — break-even calculator + yield estimator
• SmartPrice — AI pricing recommendations
• SmartCompare — side-by-side property comparison
• SmartMatch — resort quiz / personality match
• SmartBudget — vacation budget planner
• All public — no account required (lead generation)

DYNAMIC PRICING ENGINE:
• Urgency discounts (graduated 0-15%)
• Seasonal adjustment factors
• Demand-based pricing (bids + search volume)

NOTIFICATION CENTER:
• Multi-channel routing (in-app, email, SMS)
• Per-type, per-channel preferences
• TCPA-compliant SMS opt-in + STOP keyword
• Seasonal event reminders + cron-driven scheduling

OWNER DASHBOARD ("My Rentals"):
• Earnings tracking (lifetime, YTD, monthly)
• Booking management with confirmation workflow
• Bid activity feed (real-time)
• Maintenance fee coverage percentage bar
• 4 tabs: Dashboard, My Listings, Bookings & Earnings, Account
```

Speaker Notes:

> "We don't just acquire owners — we empower them. The RAV Smart Suite is a collection of five free public tools — SmartEarn for break-even and yield analysis, SmartPrice for AI pricing guidance, SmartCompare for side-by-side property comparison, SmartMatch as a resort quiz, and SmartBudget for vacation planning. All five are live, no account required, and serve as our primary lead generation engine. On top of that, our Dynamic Pricing engine automatically adjusts recommendations based on urgency, seasonality, and demand signals. And the Owner Dashboard gives them a complete command center — earnings, bookings, bids, and verification all consolidated into four streamlined tabs."

SLIDE 13: Technology & Engineering Quality

Visual: Clean metrics grid. Green checkmarks. Technical credibility.

Text:

```
ENGINEERING EXCELLENCE                                    [ALL BUILT & VERIFIABLE]

956 automated tests (121 test files) — all passing
 97 P0 critical-path tests — `npm run test:p0` (~2s)
  0 TypeScript errors — strict mode
  0 lint errors — ESLint enforced
  5-job CI/CD pipeline — GitHub Actions
 46 database migrations — deployed
 30 edge functions — serverless, auto-scaling
 48 sessions shipped — 19 months

Tech Stack:
React 18 + TypeScript + Vite │ Tailwind CSS + shadcn/ui
Supabase (Auth, PostgreSQL + RLS, Edge Functions)
VAPI.ai (Voice) + OpenRouter (Text Chat)
Stripe (Payments) + Resend (Email)
Vitest + Playwright + Percy (Testing)

"We don't just talk about building — we ship."
```

Speaker Notes:

> "A few words about our engineering foundation, because execution matters. We have 956 automated tests across 121 test files — all passing, including 97 P0 critical-path tests that run in about two seconds. Zero type errors, zero lint errors, a 5-job CI/CD pipeline that runs on every commit. 46 database migrations, 30 serverless edge functions, row-level security on every table. We've shipped 48 development sessions over 19 months. Every number on this slide is real and verifiable right now. This isn't a prototype — it's a production-grade platform."

SLIDE 14: Business Model

Visual: Revenue flow diagram. Booking amount → Owner payout + RAV commission.

Text:

```
BUSINESS MODEL                                            [BUILT — configurable in platform]

REVENUE: No upfront fees to list. 15% default commission on successful bookings only (configurable; Pro

COMMISSION TIERS:
Free Owner:     15% commission  │  1 listing    │  $0/mo
```

```
Pro Owner:      13% commission  |  5 listings    |  $29.99/mo
Business Owner: 10% commission  |  Unlimited     |  $99.99/mo

TRAVELER TIERS:
Free:     Basic search, 10 voice searches/day     |  $0/mo
Plus:     Enhanced filters, 50 voice/day           |  $9.99/mo
Premium:  Unlimited voice, early access            |  $19.99/mo

ADDITIONAL REVENUE STREAMS:
• Public API with tiered rate limits         [BUILT]
• Referral program (owner acquisition)       [BUILT]
• Featured listing placements                [Future]
• Premium analytics for owners               [Future]
• Resort affiliate referral fees              [Future]
```

Labels: Commission model and tiers are [BUILT]. Revenue streams marked "Future" are [PROJECTED].

Speaker Notes:

> "Our revenue model is straightforward. We take a 15% default commission on every booking, tiered by the owner's membership level. Free owners pay 15%; Pro owners get a 2% discount for $30 a month; Business owners get a 5% discount for $100 a month. On the traveler side, we offer free access with limited voice search, and paid tiers with expanded quotas and features. The entire tier system, commission calculation, and payment flow is built and operational. Future revenue streams include featured placements, premium analytics, and data licensing — but those are clearly future additions."

SLIDE 15: Unit Economics (Projected)

Visual: Clean metric cards. Clearly labeled as projections.

Text:

```
UNIT ECONOMICS — PROJECTED TARGETS                      [ALL PROJECTED]

Based on our commission model and industry benchmarks:

Average Booking Value:    $1,200    (industry avg for vacation club rentals)
Platform Commission:      15%       (blended, across tiers)
Revenue per Booking:      $180      (target)
Target CAC:               $40-68    (blended across channels)
Target LTV:               $500+     (repeat bookings over 24 months)
Target LTV:CAC Ratio:     8-12:1    (industry best practice: 3:1)
Target Contribution Margin: 85%+    (software marketplace model)
Target Payback Period:    <4 weeks   (from first booking)

⚠  These are targets, not actuals.
    Real metrics will be tracked from Day 1 of public launch.
```

Speaker Notes:

> "Let me be transparent about where we are. These are projected unit economics based on our commission model and industry benchmarks — not actuals. We haven't launched publicly yet, so we don't have real traction data. What we DO have is a fully built platform, a clear revenue model, and targets grounded in industry data. The average vacation club rental books at around $1,200. At our blended 15% commission, that's $180 per booking to us. With efficient acquisition through our calculator tool and SEO content, we're targeting CAC under $68. These numbers will be validated the moment we launch — and we'll be tracking from day one."

SLIDE 16: Go-to-Market Strategy

Visual: Timeline or roadmap graphic. 4 phases.

Text:

```
GO-TO-MARKET                                          [PROJECTED TIMELINE]

NOW:  PRE-LAUNCH
      Platform fully built │ Demo at dev.rent-a-vacation.com
      Seed data for demonstrations │ Marketing assets in development

Q2:   BETA LAUNCH
      Open to initial owners from timeshare communities
      Open to initial travelers from waitlist
      Real-world validation + feedback loops

Q3:   PUBLIC LAUNCH
      "Ask RAVIO" campaign │ RAV SmartEarn SEO
      PR outreach │ Paid social (targeted)
      Google Search (high-intent keywords)

Q4:   SCALE
      iOS + Android app (Capacitor)
      Brand partnerships │ "Post a Wish" campaign
      Content marketing engine │ Referral program
```

Speaker Notes:

> "Here's our go-to-market plan. We're currently in pre-launch — the platform is fully built and we're using this time to prepare marketing assets, refine workflows with our team, and build our initial pipeline. In Q2, we open to a controlled beta — inviting owners from timeshare communities and travelers from our waitlist. Q3 is our public launch, led by the Ask RAVIO campaign and the RAV SmartEarn as our primary SEO and owner acquisition tools. By Q4, we're scaling with mobile apps, brand partnerships, and content marketing. The key point: we're not starting from scratch in Q2. The product is built. We're launching, not building."

SLIDE 17: Competitive Moat

Visual: Comparison table or fortress graphic.

Text:

```
WHY WE WIN                                          [BUILT CAPABILITIES]

Executive BI (RAV Insights)   ✓       —       —       —        —

11 capabilities that no competitor offers today.
```

Speaker Notes:

> "This is our competitive position. Eleven of our core capabilities are industry firsts — AI voice search, AI text chat, two-sided Marketplace, Wishes (renter open call), RAV Deals distressed inventory surface, resort master data, fair value scoring, a five-tool Smart Suite, dynamic pricing, multi-channel notification center, and a public developer API. VRBO and Airbnb are horizontal platforms with hundreds of millions in engineering resources, but they're not purpose-built for vacation clubs. They don't understand resort confirmation workflows, maintenance fee economics, or owner verification needs. RedWeek and TUG are community sites, not technology platforms. Our moat is the combination of AI, data, and vacation-club-specific workflows — and it compounds over time."

SLIDE 18: Roadmap — What's Next

Visual: Road or timeline graphic with milestones.

Text:

```
WHAT'S NEXT                                         [PLANNED]
```

```
NEAR TERM (Q2 2026):
• Voice admin controls & observability dashboard
• Public beta launch with initial owner/traveler cohort
• "Ask RAVIO" launch campaign

MID TERM (Q3-Q4 2026):
• Voice-assisted listing creation, booking, and bidding
• iOS + Android app (Capacitor native shells)
• Brand partnerships (Hilton, Marriott, Disney outreach)
• A2P 10DLC SMS activation (post LLC/EIN — flips `SMS_TEST_MODE=false`)
• Content marketing engine

LONG TERM (2027):
• Calendar sync (Google, Outlook)
• International expansion beyond U.S.
• Enterprise tools for multi-property owners
```

Speaker Notes:

> "Near term, we're adding voice admin controls — so our team can manage voice search settings without code deploys — and preparing for our beta launch. Mid-term, we're extending RAVIO to assist with the full workflow — not just search, but listing creation, booking, and bidding, all by voice. We're also building native mobile apps and beginning partnership outreach to the major vacation club brands. Long-term, we see calendar integration, international expansion, and enterprise tools for property management companies. Dynamic pricing is already built — urgency discounts, seasonal factors, and demand-based adjustments are all live. But every future item is built on the foundation we've already shipped."

Name Your Price. Book Your Paradise.
```

Speaker Notes (adjust based on audience):

For investors:

> "We've built a complete, production-grade marketplace for a $10.5 billion industry with no tech-first leader. 48 sessions shipped, 956 automated tests, industry-first AI + bidding + multi-channel notification capabilities. We're looking for [investment amount] to fund our public launch, initial marketing, and first 12 months of operation. I'd love to walk you through the live demo and discuss how we can work together."

For partners:

> "We've built a platform that serves your owners better than anything on the market today. I'd love to discuss a pilot program where we can demonstrate value to your owner community — reduced churn, increased satisfaction, and a new revenue channel. Let's set up a demo with your team."

For general audience:

> "The platform is built. The technology works. The market is ready. We're looking for owners to list their first properties and travelers who want to be first to experience AI-powered vacation search. Visit dev.rent-a-vacation.com to see it live, or reach out to learn more."

OPTIONAL DEEP-DIVE SLIDES

Slide A: RAV Command (Executive Dashboard)

Visual: Screenshot of the executive dashboard (dark theme).

Text:

```
RAV INSIGHTS — Investor-Grade Business Intelligence      [BUILT]
(formerly "RAV Command" — Session 47 rebrand)

6 Sections:
1. HeadlineBar — 5 real-time KPI pills
2. BusinessPerformance — GMV trend, bid activity, revenue waterfall
3. MarketplaceHealth — Liquidity Score™, supply/demand map
4. MarketIntelligence — AirDNA + STR benchmarks (BYOK pattern)
5. IndustryFeed — Live news, regulatory radar, macro indicators
6. UnitEconomics — CAC, LTV, take rate, MoM growth

Proprietary Metrics:
• Liquidity Score™ — marketplace health composite (0-100)
• Bid Spread Index™ — price discovery efficiency

"Bloomberg Terminal meets vacation rental marketplace."
```

Speaker Notes:

> "For our leadership and investors, we built RAV Insights — an executive dashboard with 6 sections covering business performance, marketplace health, market intelligence, industry news,

> and unit economics. It includes two platform-specific metrics: the Liquidity Score, a composite marketplace health index, and the Bid Spread Index, which measures how efficiently our bidding system discovers fair prices. The dashboard also supports a 'Bring Your Own Key' pattern for third-party data sources like AirDNA and STR — demo mode by default, connected when API keys are provided. This entire dashboard is built and live in our demo environment."

Slide B: Seed Data System (For Technical Audiences)

Visual: Architecture diagram showing 3-layer seed system.

Text:

```
DEMO DATA ARCHITECTURE                                  [BUILT]

3-Layer Seed System:
Layer 1: Foundation — 8 permanent users (never wiped)
Layer 2: Inventory — 10 properties, 30 listings
Layer 3: Transactions — 50 renters, 90+ bookings, pipeline data

• One-click reseed from admin dashboard
• Production-safe (blocked outside DEV)
• Growth curve simulation (90-day ramp)
• FK-safe 21-table deletion order

Why this matters: We can demo any scenario — full pipeline,
empty marketplace, specific user journeys — with one click.
```

Slide C: Technical Architecture (For Engineering Audiences)

Visual: Architecture diagram.

Text:

```
TECHNICAL ARCHITECTURE                                  [ALL BUILT]

Frontend:  React 18 + TypeScript + Vite + Tailwind + shadcn/ui
Backend:   Supabase (PostgreSQL + RLS + Auth + Edge Functions)
AI Voice:  VAPI.ai (Deepgram Nova-3 + GPT-4o-mini + ElevenLabs)
AI Text:   OpenRouter (Gemini 3 Flash) + SSE streaming
Payments:  Stripe Checkout + Webhooks
Email:     Resend API
Testing:   Vitest + Playwright + Percy (visual regression)
CI/CD:     GitHub Actions (5-job pipeline)
Hosting:   Vercel (frontend) + Supabase (backend)
Mobile:    PWA today, Capacitor native planned

API:      Public REST API + Developer Portal + API key auth
Tools:    RAV Smart Suite (5 tools) at /tools
Pricing:  Dynamic pricing engine (urgency, seasonal, demand)

Security: Row-Level Security on all tables
```

```
JWT-based auth with role enforcement
Security definer functions prevent RLS recursion
```

PRESENTATION TIPS

Do's

- **Lead with the demo.** The product speaks louder than slides. Switch to dev.rent-a-vacation.com and show voice search, bidding, owner dashboard live.
- **Be honest about stage.** "We're pre-launch with a fully built platform" is more impressive than vague claims of traction.
- **Emphasize execution velocity.** 39 sessions. 771 tests. This team ships.
- **Let the AI speak.** When demoing RAVIO, let the audience hear the voice response. It's magical.
- **Know your audience.** Investors want unit economics and market size. Partners want integration capability. Users want to see it work.

Don'ts

- **Don't present seed data as real traction.** If asked about users or GMV, be clear: "We're pre-launch. These are demonstration numbers."
- **Don't apologize for being pre-launch.** Frame it as discipline: "We built it right before we launched."
- **Don't read the slides.** Use them as visual anchors. The story is in your words.
- **Don't skip the live demo.** It's your strongest proof point.

Demo Script (5 minutes)

1. Open dev.rent-a-vacation.com → show homepage hero
2. Click voice search → say "Find me a 2-bedroom in Orlando under $1,500"
3. Show results appearing with voice narration
4. Click a listing → show PropertyDetail with ResortIQ data
5. Show bidding marketplace → open listing with bids
6. Switch to admin dashboard → show Dev Tools (one-click seed)
7. Switch to executive dashboard → show RAV Command with charts
8. Switch to owner dashboard → show earnings and bid activity
9. Return to slides

This script is designed for a 19-slide, 20-minute presentation. Adjust timing and depth based on

audience. Always demo live — the product is your best salesperson.
