BRAND LOCK — Rent-A-Vacation

> **Purpose:** This is the single source of truth for all brand messaging, claims, and feature positioning. Every other document (brand docs, social media, pitch decks, source code, email templates) MUST align with this file.
>
> **Rule:** If this document and another document disagree, this document wins. Update the other document.
>
> **Last reviewed:** April 15, 2026 (Session 52 — Marketplace Terminology Lock: Listing / Wish / Offer)

🔒 VOCABULARY LOCK (Session 52)

The user-facing marketplace uses **three nouns only**:

Noun	Meaning	DB table (internal)
Listing	An owner posts a property + dates for rent	`listings`
Wish	A renter posts a dream trip (open call — destination, dates, budget)	`travel_requests`
Offer	A proposed transaction at a price — works in both directions	`listing_bids` (renter→listing) OR `travel_proposals` (owner→Wish)

"Offer" replaces "Bid" AND "Proposal" in all UI. "Bid" and "Proposal" remain only in DB column names, hook names, and internal code.

"RAV" prefix is dropped from all transactional nouns and CTAs: "RAV Offer" → Offer, "RAV Wish" → Wish, "Make a RAV Offer" → Make an Offer, "Make a RAV Wish" → Post a Wish.

Header nav shows a single **Marketplace** link (not separate "Name Your Price" + "Make a Wish" links). "Name Your Price. Book Your Paradise." remains as the brand tagline/hero slogan but is not a nav label.

See Section 9 for the complete Terminology Context Map.

---

1. MESSAGING HIERARCHY

Features are presented in this order across all materials. Lead with the **Marketplace** — a two-sided negotiation platform with Listings, Wishes, and Offers flowing in both directions. AI is a supporting

differentiator.

Tier	Feature	Role	Lead With
Primary	**The Marketplace** (Listings · Wishes · Offers)	Core product — two-sided negotiation platform	Always first in any feature list
Primary	**RAV Deals** (distressed inventory)	Discovery surface — motivated sellers, urgent deals	Third in discovery contexts
Supporting	**TrustShield + PaySafe** (trust)	Removes risk, enables transactions	After marketplace features — builds confidence
Supporting	**Ask RAVIO / Chat with RAVIO** (AI)	Discovery tool — voice and text search	Supporting — nice-to-have, not the headline
Supporting	**RAV Smart Suite** (5 tools)	Owner acquisition + lead generation	Supporting — owner onboarding
Supporting	**My Rentals** (owner dashboard)	Owner tools — listings, Offers sent/received, bookings, earnings	Nav: "My Rentals"
Infrastructure	**RAV Insights** (executive dashboard)	Business intelligence for leadership	
Infrastructure	**RAV Ops** (admin operations)	User/listing/verification management	
Infrastructure	**ResortIQ** (resort directory)	Data layer — auto-fill, consistency	Mention when relevant, don't feature-lead

Hierarchy rules

- In any bio, headline, or opening sentence: **the Marketplace concept (Listings, Wishes, Offers)** appears first
- The brand slogan "**Name Your Price. Book Your Paradise.**" remains the hero tagline and opener — it describes the *mechanic* (you name the price via an Offer) even though the nav says "Marketplace"
- RAVIO is mentioned as a feature, not as the brand identity or primary differentiator
- Campaign launches lead with marketplace mechanics; AI campaigns are secondary/later
- Platform-internal features (RAV Deals, RAV Insights, RAV Ops, RAV Smart[X], RAVIO) retain the RAV prefix — it identifies them as ours
- Transactional nouns and CTAs are NOT RAV-prefixed: Offer, Wish, Make an Offer, Post a Wish

2. APPROVED SAVINGS CLAIM

The claim

"Save 20-40% compared to resort-direct booking" [INDUSTRY DATA]

Approved phrasing

Form	Text	Use In
Short (bios)	"Save 20-40% vs booking direct"	Social media bios, ad headlines
Medium	"Save 20-40% compared to resort-direct rates"	Landing pages, email subject lines
Long	"Rent directly from verified timeshare owners and save 20-40% compared to booking through the resort. Owners set their own prices — often well below what resorts charge for the same rooms."	Feature pages, FAQ, How It Works

Methodology

- **Source:** ARDA industry data shows resort-direct bookings carry a 20-40% markup over owner cost
- **Mechanism:** RAV connects travelers directly with owners who price below resort rates. RAV adds a 15% platform fee (configurable: Pro -2%, Business -5%). The net savings for travelers comes from eliminating the resort markup
- **Label:** [INDUSTRY DATA] — based on published resort markup benchmarks (ARDA, industry pricing analysis)
- **Validation plan:** Once real bookings occur, compare actual RAV transaction prices against published resort rates for the same properties to verify the range

Retired claims — DO NOT USE

Retired Claim	Why
"Up to 70% off"	Not supported by pricing code or realistic market scenarios
"50-70% savings"	Same — the math yields 20-40% in typical scenarios
"Save up to 70%"	Same
"$1,100 vs $3,200" example	Below our own calculator's income estimates; misleading

"On average, our renters save 50-70%"	No data to support "on average" — we are pre-launch

3. APPROVED TAGLINES

Ranked by priority. Use the highest-applicable tagline for the context.

Rank	Tagline	Context
1	**Name Your Price. Book Your Paradise.**	Master — use everywhere, default choice
2	**Luxury Resorts. Owner Prices.**	Traveler acquisition — ads, landing pages
3	**Your Timeshare. Your Income. Your Terms.**	Owner acquisition — ads, email
4	**Post a Wish. Owners Make It Happen.**	Wishes feature — specific campaigns
5	**Just Say Where. RAVIO Does the Rest.**	AI/voice campaigns — secondary, not lead

Secondary taglines (approved for specific contexts)

Tagline	Context
Stop Paying. Start Earning.	Owner pain point / SmartEarn calculator
The Vacation You Want, at the Price You Choose.	Bidding feature highlight
Verified Owners. Protected Payments. Guaranteed Stays.	Trust campaign
Direct from Owners. No Middlemen. No Markups.	Value proposition
117 Resorts. One Platform. Your Price.	Scale + bidding
Where Owners Earn and Travelers Save.	Two-sided value

Primary hashtag

Hashtag	Usage
#NameYourPrice	Primary — marketplace moments, Offer highlights
#PostAWish	Wish-centric stories, owner Offers on Wishes
#RAVDeals	Last-minute deals, distressed inventory (platform-branded surface)
#RentAVacation	General brand

#AskRAVIO	Voice/text search demos only (not primary)

4. FEATURE DICTIONARY

Canonical names and descriptions. Use these exact names in all materials.

Canonical Name	One-Line Description	Tier	Notes
Marketplace	Two-sided negotiation platform where renters and owners exchange Offers on Listings and Wishes	Primary	Nav label: "Marketplace". Route: `/marketplace`. Tagline: "Name Your Price. Book Your Paradise."
Listing	An owner's property + dates posted for rent (direct-book or open-to-Offers)	Primary	DB: `listings`. Users see it as the noun "Listing" everywhere
Wish	A renter's open call — destination, dates, budget. Owners send Offers on Wishes	Primary	DB: `travel_requests`. UI term is "Wish" — never "Request" or "RAV Wish" in user-facing copy
Offer	A proposed transaction at a price. Renters send Offers on Listings; owners send Offers on Wishes. Same noun, both directions	Primary	DB: `listing_bids` (renter→listing) OR `travel_proposals` (owner→Wish). UI term is "Offer" — never "Bid" or "Proposal"
RAV Deals	Curated distressed inventory — expiring weeks from motivated sellers. Each Deal is a Listing with urgency signals	Primary	Feeds into the Marketplace. Platform-branded surface.
TrustShield	Multi-step owner verification — identity, ownership, and property confirmation	Supporting	Always pair with PaySafe
PaySafe	Stripe-powered escrow — funds held until check-in is confirmed	Supporting	Always pair with TrustShield
Ask RAVIO	Voice-powered AI vacation search — say what you want, get results	Supporting	RAVIO = Rent-A-Vacation Intelligent Operator

Chat with RAVIO	Text-based AI assistant with streaming responses and property cards	Supporting	Same AI, text interface
RAV SmartEarn	Maintenance fee calculator + rental income estimator — shows break-even	Supporting	Free, no account required. Lead gen for owners
RAV SmartPrice	AI-powered pricing recommendations — Fair Value badges on listings	Supporting	Underpriced / Fair / Overpriced labels
RAV SmartCompare	Side-by-side cost comparison across booking platforms	Supporting	Free tool
RAV SmartMatch	Quiz to find your ideal vacation club brand	Supporting	Free tool
RAV SmartBudget	Vacation budget planning tool	Supporting	Free tool
My Rentals	Owner dashboard — earnings, listings, bookings, tools	Supporting	Formerly "RAV Edge" / "Owner's Edge." Nav label = "My Rentals" (mirrors "My Trips" for renters)
RAV Insights	Executive dashboard — real-time business intelligence for leadership	Infrastructure	Formerly "RAV Command." Nav label = "RAV Insights"
RAV Ops	Admin operations — users, listings, verifications, disputes	Infrastructure	Formerly "Admin Dashboard." Nav label = "RAV Ops"
ResortIQ	Curated resort directory — 117 resorts, 351 unit types from 9 brands. Auto-populates listing details so owners list in minutes and travelers see consistent, accurate resort info	Infrastructure	NOT "proprietary" — data is curated from publicly available resort information
Dynamic Pricing	Urgency discounts, seasonal factors, demand-based price adjustments	Infrastructure	Transparent to users

5. NUMERICAL CLAIMS REGISTRY

Every number we use in marketing, with its source and label.

Industry data [INDUSTRY DATA]

Claim	Source	Notes
9.9 million U.S. households own timeshares	ARDA 2024 State of the Vacation Timeshare Industry	
$10.5 billion vacation ownership industry	ARDA / IBIS World	Total market, not secondary
$1,120 average annual maintenance fee	ARDA 2024	Per-week average
Maintenance fees rising 4-8% per year	ARDA historical data	Compound annual growth
50%+ of owners want to sell or reduce commitment	Industry surveys (multiple)	Approximate
Resort-direct bookings carry 20-40% markup over owner cost	Industry pricing analysis	Basis for our savings claim

Platform facts [BUILT]

Claim	Source	How to Verify
117 resorts, 351 unit types	Database query	`SELECT count(*) FROM resorts / unit_types`
9 vacation club brands	`calculatorLogic.ts`	Hilton, Marriott, Disney, Wyndham, Hyatt, Bluegreen, Holiday Inn Club, WorldMark, Other
825+ automated tests	`npm run test`	Run anytime — count updates with each session
46 database migrations	`supabase/migrations/`	Count files
30 edge functions	`supabase/functions/`	Count directories (excluding `_shared`)
15% default commission	`src/lib/pricing.ts` line 11	`RAV_MARKUP_RATE = 0.15`
Commission tiers: Pro -2%, Business -5%	Migration 011	Configurable in admin settings

Projected [PROJECTED]

Claim	Basis	Use With Caution
$2-3 billion secondary rental market	ARDA + IBIS estimates	Serviceable addressable market

1-3% market capture = $20-90M GMV	Business model projection	Investor materials only
85%+ contribution margin	Unit economics model	Investor materials only
12:1 LTV:CAC ratio	Industry benchmark modeling	Investor materials only

6. DO NOT SAY

These claims, terms, and framings are retired. Do not use them in any material.

Retired	Replacement	Reason
"Up to 70% off" / "50-70% savings" / "Save 70%"	"Save 20-40% compared to resort-direct booking"	Unsubstantiated — pricing code and market data support 20-40%
"$1,100 vs $3,200" savings example	Use calculator-backed examples only	$1,100 is below our own SmartEarn estimates
"Proprietary database" (for ResortIQ)	"Curated resort directory"	Data is from public resort information, not proprietary
"Proprietary resort data" / "verified resort data"	"Resort data curated from official sources"	Same — honest about data origin
Leading with RAVIO as primary differentiator	Lead with Name Your Price / Vacation Wishes	Marketplace mechanics are the product; AI is supporting
#AskRAVIO as primary hashtag	#NameYourPrice is primary	Aligns with marketplace-first messaging
"The world's first AI vacation concierge" as opening line	Open with marketplace value, mention AI as feature	AI is a differentiator but not the headline
"On average, our renters save X%"	"Designed to save you 20-40%"	We are pre-launch — no actual average exists
"Proprietary metrics" (for Liquidity Score, etc.)	"Platform metrics" or "marketplace health metrics"	These are calculated from platform data, not proprietary research
"Vacation Wishes" / "RAV Wishes" / "RAV Wish"	**Wish** / **Wishes**	Session 52 — user-facing terms drop the RAV prefix
"Owner's Edge" / "RAV Edge"	**My Rentals**	Session 47 — nav mirrors "My Trips" for renters

"RAV Command"	**RAV Insights**	Session 47 — self-descriptive: "I get business insights here"
"Admin Dashboard"	**RAV Ops**	Session 47 — self-descriptive: "operations management"
"Explore" (nav label)	**Browse Rentals**	Generic; replaced with descriptive action
"Make a RAV Offer"	**Make an Offer**	Session 52 — transactional CTAs drop RAV prefix
"Make a RAV Wish" / "Make a Wish"	**Post a Wish**	Session 52 — consistent verb; drops RAV prefix
"Bid" / "Bids" (as user-facing UI term)	**Offer** / **Offers**	Session 52 — single noun for both directions. "Bid" stays in DB only
"Proposal" / "Submit Proposal" (as user-facing UI term)	**Offer** / **Send an Offer**	Session 52 — unified with "Offer" across directions
"Name Your Price" / "Make a Wish" (as separate header nav links)	**Marketplace** (single link)	Session 52 — one entry point with role-aware default tab inside
"/bidding" (route)	**/marketplace**	Session 52 — /bidding redirects to /marketplace
"Browse Deals" / "Last-Minute Deals" (as CTA)	**Browse RAV Deals**	Discovery CTAs retain RAV identity for platform-branded surfaces
#VacationWishes (hashtag)	**#PostAWish**	Session 52 — aligns with new CTA verb
#RAVWishes (hashtag)	**#PostAWish**	Session 52 — drops RAV prefix from user-facing hashtags

---

7. RESORTIQ — HONEST POSITIONING

ResortIQ is a **curated resort directory**, not an AI system or proprietary database.

What it actually is

- A database of 117 resorts and 351 unit types from 9 vacation club brands
- Data curated from officially published resort information (amenities, unit specs, locations)
- Auto-populates listing forms when owners create listings (saves time, ensures consistency)

- Provides travelers with standardized, accurate resort information

What the name means

- "IQ" = structured knowledge about resorts, organized for fast retrieval
- It's a **knowledge layer**, not artificial intelligence
- The value is **convenience** (auto-fill) and **consistency** (every listing has complete, accurate resort data)

Approved descriptions

- Short: "Curated resort directory — 117 resorts, 351 unit types"
- Medium: "Our resort directory covers 117 resorts and 351 unit types across 9 brands. It auto-fills listing details so owners can list in minutes."
- Long: "ResortIQ is our curated resort directory — 117 resorts and 351 unit types from Hilton, Marriott, Disney, Wyndham, and more. When an owner lists a property, ResortIQ auto-populates bedrooms, bathrooms, square footage, and amenities. When a traveler views a listing, they see consistent, accurate resort information. This saves owners time and gives travelers confidence in what they're booking."

Do NOT describe ResortIQ as

- "Proprietary database" — the data is from public sources
- "AI-powered" — it's a structured data lookup, not AI
- "Verified resort data" — use "curated from official resort sources" instead
- "Professional resort profiles" — implies more than what it is; use "resort directory"

---

8. BRAND ARCHITECTURE & NAMING RULES

> Added: Session 47, April 12, 2026

The RAV Brand Family

Every named feature follows one of three naming patterns. When adding a new feature, use this framework:

Pattern	When to Use	Examples
RAV [Name]	Platform-branded surfaces — internal tools, AI, dashboards, curated discovery surfaces	RAVIO, RAV Insights, RAV Ops, RAV Deals, RAV Smart[X]

[CompoundName]	Trust & infrastructure — the "serious" layer where gravitas matters	TrustShield, PaySafe, ResortIQ
[Plain Noun]	Marketplace mechanics — user-facing nouns that describe the thing	Listing, Wish, Offer, Marketplace
[Action Phrase]	Verb-based CTAs — what users DO. **Plain language, NO RAV prefix on transactional CTAs** (Session 52)	Make an Offer, Post a Wish, Browse RAV Deals (platform surface exception), List Your Property
[Plain Language Nav]	Header/nav labels — self-explanatory, says what you GET or DO	Marketplace, My Trips, My Rentals, Browse Rentals

Nav Labels vs Brand Names (CRITICAL)

> **Nav labels = what you DO or what you GET (plain language, self-explanatory) Page titles = brand name + one-line value promise**

Nav Label	Page Title	Who sees it
Marketplace	Marketplace — Listings & Wishes	Everyone (hero item, accent color). Role-aware default tab inside.
Browse Rentals	Vacation Rentals	Everyone
My Trips	My Trips	Renters
My Rentals	My Rentals	Owners
RAV Insights	RAV Insights — Business Intelligence	Executives
RAV Ops	RAV Ops — Operations	Staff/Admin
List Your Property	List Your Property	Everyone (owner CTA)

Naming Rules

1. **Every nav label must pass the test: "does my customer instantly know what they get?"**
2. **RAV prefix for platform-branded surfaces** (RAV Insights, RAV Ops, RAV Smart[X], RAV Deals, RAVIO) — these are ours
3. **Plain nouns for marketplace mechanics** (Listing, Wish, Offer, Marketplace) — users need clarity, not branding
4. **Plain language for customer-facing nav** (Marketplace, My Trips, My Rentals, Browse Rentals) — customers need clarity

5. **Tools always use "RAV Smart[X]"** pattern — one compound word after Smart (SmartEarn, not Smart Earn)
6. **Discovery filters are NOT branded** — "Search by Event," "Browse by Activity" are UI labels, not products
7. **"Marketplace" is the hero nav item** — accent color (coral), bolder weight. It visually dominates.

CTA Naming Rules (Session 52 — UPDATED)

1. **Transactional CTAs use plain language, NOT RAV-prefixed.** Session 52 removed the RAV prefix from action verbs to reduce user friction.
    - ✓ Make an Offer · Post a Wish · List Your Property · Open the Marketplace
    - ✕ Make a RAV Offer · Make a RAV Wish
2. **Platform-branded surfaces keep "Browse RAV [X]" for discovery CTAs** when the destination is RAV-branded:
    - ✓ Browse RAV Deals (takes you to the branded RAV Deals surface)
3. **The brand slogan "Name Your Price. Book Your Paradise." is retained** as the master tagline — it lives in the hero, taglines, meta descriptions, pitch materials, emails. It is NOT a nav label.
4. **CTAs use verb form:** Make an Offer, Post a Wish, Open the Marketplace, Browse Rentals.

When NOT to Brand

- **Marketplace nouns** (Listing, Wish, Offer) — plain nouns win every time
- **Transactional CTAs** (Make an Offer, Post a Wish) — no RAV prefix
- **UI filters** (date pickers, location dropdowns, price sliders) — standard controls
- **Discovery lenses** (Search by Event, Browse by Activity) — they help you find listings, not transact
- **Internal/technical terms** — database table names, hook names, edge function names stay descriptive

Rebrand History

Date	Old Name	New Name	Reason
Apr 15, 2026 (S52)	RAV Wishes / RAV Wish	**Wish / Wishes**	User-facing terms drop RAV prefix
Apr 15, 2026 (S52)	Make a RAV Offer	**Make an Offer**	Transactional CTAs drop RAV prefix
Apr 15, 2026 (S52)	Make a Wish / Make a RAV Wish	**Post a Wish**	Consistent verb; no RAV prefix

Apr 15, 2026 (S52)	Bid / Proposal (UI)	**Offer**	One noun for both directions; "Bid"/"Proposal" stay in DB only
Apr 15, 2026 (S52)	Name Your Price + Make a Wish (nav links)	**Marketplace** (single link)	One entry point, role-aware default tab
Apr 15, 2026 (S52)	/bidding (route)	**/marketplace**	Semantic alignment; /bidding redirects
Apr 15, 2026 (S52)	#RAVWishes (hashtag)	**#PostAWish**	Aligns with new CTA verb
Apr 12, 2026 (S47)	Vacation Wishes	RAV Wishes	Retired S52 — see above
Apr 12, 2026 (S47)	Owner's Edge	RAV Edge	Retired same session — see next row
Apr 12, 2026 (S47)	RAV Edge	**My Rentals**	Nav mirrors "My Trips" — self-descriptive
Apr 12, 2026 (S47)	Make an Offer	Make a RAV Offer	Retired S52 — see top row
Apr 12, 2026 (S47)	*(new)*	**RAV Deals**	New feature — distressed inventory surface
Apr 12, 2026 (S47)	*(new)*	**Browse RAV Deals**	CTA for RAV Deals page
Apr 12, 2026 (S47)	RAV Command	**RAV Insights**	Self-descriptive: business intelligence
Apr 12, 2026 (S47)	Admin Dashboard	**RAV Ops**	Self-descriptive: operations management
Apr 12, 2026 (S47)	Explore (nav)	**Browse Rentals**	Generic → descriptive action

---

9. TERMINOLOGY CONTEXT MAP (Session 52 — CANONICAL)

> This is the definitive reference for what words appear on screen in each context. Check this before writing any user-facing text.

The three marketplace nouns

Noun	What it means	Who creates it	DB table
Listing	Owner posts a property + dates for rent	Owner	`listings`
Wish	Renter posts a dream trip (destination, dates, budget)	Renter	`travel_requests`
Offer	Proposed transaction at a price — works both directions	Renter (on a Listing) or Owner (on a Wish)	`listing_bids` (renter→listing) OR `travel_proposals` (owner→Wish)

"Offer" replaces both "Bid" (old UI) and "Proposal" (old UI). In the database, the two mechanics are still stored in separate tables (`listing_bids` vs `travel_proposals`) because they point at different parents — but end users see a single noun: "Offer."

Marketplace Flow Types — DEC-034 (Session 55-56)

Every booking originates from one of two flows. Both labels appear together in the UI (type answers "where did this come from", status answers "where is it in its lifecycle").

Type label (origin)	What it means	Status labels (lifecycle)	DB value
Pre-Booked Stay	Owner already has the resort reservation. Dates are fixed. Listing goes live after RAV staff verifies proof. Traveler books → **instantly confirmed**.	Just "Confirmed" — there is no pending owner step.	`listings.source_type = 'pre_booked'` · `bookings.source_type = 'pre_booked'`
Wish-Matched Stay	Traveler posts a Wish, owner submits an Offer, traveler accepts. Owner does *not* yet have the resort reservation — they have a deadline to secure it.	"Pending Confirmation" (while owner confirms at resort) → "Confirmed" (after owner submits resort confirmation number).	`listings.source_type = 'wish_matched'` · `bookings.source_type = 'wish_matched'`

Why two flows: Pre-Booked stays are ready-to-book inventory. Wish-Matched stays are a traveler-driven request that the owner fulfills after acceptance. RAV staff verification and owner UX are different per flow (Pre-Booked owners prove the reservation once, at list time; Wish-Matched owners confirm after each accepted Offer).

Visual system:

- Pre-Booked Stay badge: emerald outline + `CalendarCheck` icon
- Wish-Matched Stay badge: amber outline + `Sparkles` icon

- Badge component: `src/components/marketplace/ListingTypeBadge.tsx`

Search visibility: Wish-Matched listings are auto-created for a specific accepting traveler; they must never appear in generic public search. Search queries filter `source_type = 'pre_booked'`. Wish-Matched listings are only reachable via their direct `/property/:id` URL during the accepting traveler's checkout.

Where the badge renders:

- MyBookings (renter) · PropertyDetail · OwnerListings · AdminEscrow rows + filter select

Owner-confirmation countdown (`OwnerConfirmationTimer.tsx`) renders only for Wish-Matched bookings. Pre-Booked bookings skip it entirely — their `booking_confirmations` row is created with `owner_confirmation_status='owner_confirmed'` at payment time.

Notifications (catalog `type_key`):

- `wish_owner_confirming` — traveler, right after payment on a Wish-Matched booking ("owner confirming by {deadline}")
- `wish_owner_confirmed` — traveler, when owner confirms ("your stay is locked in")
- `wish_owner_failed_to_confirm` — traveler, if owner times out (timeout cron is a parked follow-up)

Pre-Booked bookings use the existing `booking_confirmed` notification — no wish-specific messaging.

Navigation & Page Titles — Path 3 Hybrid (Session 55)

Pattern: keep the short brand name as the dominant H1 + CTA label, add a small-caps **role-descriptive eyebrow** above it so users instantly understand what they're looking at.

Location	Nav Label	Page Eyebrow (small caps)	Page H1	Link
Header nav (everyone)	**Marketplace**	—	Marketplace — Listings & Wishes	/marketplace
Header nav (everyone)	**Browse Rentals**	—	Vacation Rentals	/rentals
Header nav (owner)	**My Rentals**	Property Owner Dashboard	My Rentals	/owner-dashboard
Header nav (renter)	**My Trips**	Traveler Dashboard	My Trips	/my-trips
Header nav (admin)	**RAV Ops**	RAV Admin Dashboard (or RAV Staff Dashboard — dynamic by role)	RAV Ops	/admin

Header nav (executive)	**RAV Insights**	Executive Dashboard — Business Intelligence	RAV Insights	/executive-dashboard
Header nav (tools)	**Free Tools**	—	RAV Tools	/tools
Header nav (owner CTA)	**List Your Property**	—	List Your Property	/list-property
Tab label — listings (inside Marketplace)	**Listings**	—	—	/marketplace (default for renter/anon)
Tab label — wishes (inside Marketplace)	**Wishes**	—	—	/marketplace?tab=wishes (default for owner)

Rationale: brand names like "My Rentals" / "My Trips" / "RAV Ops" remain the short, scannable CTAs in the header nav — preserving DEC-031. The descriptive eyebrow ("Property Owner Dashboard") tells a first-time user what the page represents in role terms — so the mapping between brand name and function is visually guided.

User dropdown (role-aware "My Activity")

Renter sees	Owner sees
My Trips	My Rentals
My Offers	Offers I Sent
My Wishes	Offers on My Listings
Account Settings	Account Settings

Note: Owner dropdown previously showed "My Listings" as its top item; this was an inconsistency with the nav label "My Rentals" and was corrected in Session 55. Sub-tab labels inside the dashboard (e.g., the "My Listings" tab within My Rentals) remain as sub-labels — they name a tab, not the dashboard.

CTA Buttons (plain language — no RAV prefix on transactional CTAs)

Context	Button Text	Action
PropertyDetail / ListingCard	**Make an Offer**	Opens Offer form dialog
Marketplace page (renter)	**Post a Wish**	Opens Wish creation form

TravelRequestForm / InspiredTravelRequestDialog	**Post a Wish**	Submits a Wish
TravelRequestCard (owner viewing a Wish)	**Send Offer**	Opens Offer-on-Wish form
BidFormDialog	**Send Offer**	Submits the Offer
BidsManagerDialog	**Manage Offers**	Title of dialog; "Pending Offers" / "Past Offers" sections
RAV Deals page	**Browse RAV Deals**	Platform-branded surface CTA (keeps RAV)
RAV Deals listing card	**Make an Offer**	Same as any Listing Offer
Homepage hero	**Name Your Price** (slogan)	The brand tagline — not a button label; the hero CTA routes to /marketplace
Homepage secondary CTA	**Open the Marketplace**	Links to /marketplace
Owner onboarding	**List Your Property**	Links to /list-property

Notification category labels

Filter	Label shown
All	All
Bookings	Bookings
Bids (DB value)	**Offers**
Travel Requests (DB value)	**Wishes**
Reminders	Reminders
System	System

Feature references in copy

When referring to...	Brand Name	Nav Label
The two-sided negotiation platform (umbrella)	**the Marketplace**	Marketplace
Renter's open call to the market	**Wish**	— (inside Marketplace)

An owner's rentable property/dates	**Listing**	— (inside Marketplace)
A proposed deal at a price	**Offer**	— (inside Marketplace)
The distressed inventory page	**RAV Deals**	Browse RAV Deals
The owner dashboard	**My Rentals**	My Rentals
The executive dashboard	**RAV Insights**	RAV Insights
The admin operations panel	**RAV Ops**	RAV Ops
The AI voice search	**Ask RAVIO**	—
The AI text chat	**Chat with RAVIO**	—
Owner verification	**TrustShield**	—
Payment escrow	**PaySafe**	—
Resort data directory	**ResortIQ**	—
Any Smart tool	**RAV Smart[Name]**	—

Internal vs. External Naming

Internal (code/DB)	External (UI/marketing)	Notes
`travel_requests` table	**Wish** / **Wishes**	DB name stays; UI drops RAV prefix
`travel_proposals` table	**Offer** (when owner sends it on a Wish)	Proposal → Offer in all UI
`listing_bids` table	**Offer** (when renter sends it on a Listing)	Bid → Offer in all UI
`bidding` DB concept	**Marketplace**	Broader umbrella in UI
`/marketplace` route	Marketplace	Route renamed; `/bidding` redirects
`owner-dashboard` route	My Rentals	Route can stay; display name is plain
`executive-dashboard` route	RAV Insights	Display name branded for platform
`admin` route	RAV Ops	Display name branded for platform
`useBidding` hook	(internal)	Name unchanged — internal code
`useLastMinuteDeals` hook	RAV Deals	Hook names are internal; UI shows branded

Marketplace role-aware defaults

When a user lands on `/marketplace`:

- **Renter or anonymous:** default tab = **Listings** (find a deal)
- **Owner:** default tab = **Wishes** (find renters who want their property)
- **?tab=listings** / **?tab=wishes** URL params override the default
- Legacy **?tab=requests** maps to **?tab=wishes**

Brand slogan usage

"**Name Your Price. Book Your Paradise.**" remains in:

- Homepage hero H1
- Page meta descriptions (default)
- Email footer slogan (src/lib/email.ts)
- Pitch deck / marketing materials
- Documentation + UserGuide cover pages

It does **not** appear as a nav label anymore.
